

Nawaphon Isarathanachaikul

Full Stack Developer

Bangkok, Bangkok, Thailand

nawaphon2539@gmail.com

Available on request

Professional summary

- Use front-end libraries and frameworks to build user interfaces that meet user requirements.
- Integrate application programming interfaces (APIs) to fetch data and present it clearly on screen.
- Build and refine responsive user interfaces.
- Build APIs that integrate with databases and return required results as JSON or SOAP.
- Perform create, read, update, and delete (CRUD) operations to manage user data across industries.
- Build pipelines that automate recurring development cycles.
- Use containerization to reduce development time.
- Use container orchestration systems to coordinate distributed applications.

Experience

Back End Developer

Apr 2026 — Present

Accord Innovations · Bangkok

- Work in a hybrid outsourcing role at InnovestX.
- Complete wording-change tasks in each sprint.
- Use Claude Code as an agent to complete routine coding tasks that follow technical designs from the lead.
- Use Claude Code as an agent for tasks without a lead-provided technical design, including clarifying requirements with the project manager and designing REST APIs and DBMS tables with recommendations from the lead.
- Fix bugs raised by QA using approaches including Elasticsearch and Kubernetes pod logs.
- Deploy completed tasks to SIT and UAT environments.
- Coordinate with DevOps on infrastructure needs, including API routing, API keys for new microservices, request-path permissions, HTTP-method allowlisting in the internal firewall, and public API gateway changes.
- Write Bash smoke-test scripts with AI assistance.
- Document technical API details for callers and QA engineers in Confluence.
- Deliver CRUD features, process Kafka topic data to meet business requirements, use Caffeine and Redis caches, and send data to the notification system managed by InnovestX.

Technologies Claude Code · REST APIs · DBMS · Elasticsearch · Kubernetes · Kafka · Caffeine · Redis · Bash · Confluence

Software Engineer

May 2024 — Jun 2025

Saitech Solution · Bangkok

- Worked as an outsourced onsite engineer at Aycap, a subsidiary of Bank of Ayudhya.
- Built a Regulatory Data Transformation (RDT) feature that shows the bank's client credit card usage by categories defined by the Bank of Thailand (BOT).
- Built an RDT feature that allows users to download data in Excel format.
- Built integrations with other systems, including email and an encrypted system that notifies the Bank of Thailand of updates.

Technologies React · Go · Gin · Oracle

Software Engineer

Jan 2023 — Dec 2023

Nityo Infotech · Bangkok

- Worked as an outsourced onsite engineer at TISCO Bank.
- Maintained the source code and updated it in response to requirement changes.

Technologies Node.js · MongoDB via internal API · Scala · Apache Spark · AWS

Software Engineer Backend

May 2022 — Jul 2022

LINE MAN Wongnai · Bangkok

- Maintained the restaurant system to reflect changing requirements and technical concerns.

Technologies Spring Boot 2.7.x · Go · Gin · gRPC · GraphQL · PostgreSQL · AWS

Full-Stack Software Developer

Jan 2020 — Apr 2022

WiseSoft · Bangkok

- Helped the team create a tax system that presents companies' paid-tax history according to Thailand's tax laws.

Technologies Angular 7.x · Spring Boot 2.7.x · Spring Batch · IBM Db2

Core skills

Spring Boot	RDBMS	Kafka
Redis	Angular	React
